BODAPATI BHARAT CHANDRA

Hyderabad | 9703288878 | bc833498@gmail.com | LinkedIn | GitHub | Portfolio

PROFILE

I'm a deep learning-focused CSE student who builds things end-to-end – training and evaluating models myself rather than wiring together AI APIs. Recent work includes an ensemble fake-news classifier (98.5% accuracy on 98k+ articles) and a multi-agent LLM auditing system now running inside a public-sector procurement workflow. I also took my portfolio to the #1 organic result for my own name – schema markup, canonical URLs, Search Console.

EDUCATION

GITAM University, Hyderabad 2027
B.Tech in Computer Science and Engineering *CGPA: 7.57*

EXPERIENCE

AI/ML Intern — Elevate Labs (Online) GitHub Mar 2026 – May 2026

- Built AgroSight, a plant-disease diagnosis platform: fine-tuned ResNet34 on the PlantVillage dataset across 38 disease classes / 14 crop types, served via async FastAPI inference
- Integrated Google Gemini 2.5 Flash for natural-language diagnosis explanations and an open-ended agricultural chat assistant on top of model predictions

Backend Developer — Tender & Vendor Compliance Platform - BHEL HYD (offline) GitHub 2026

- Built an air-gapped, multi-agent LLM auditing system (Technical Auditor, Risk Evaluator, Fallback Specialist, Consensus Judge) that evaluates vendor PDFs against spec sheets using TF-IDF retrieval and citation-backed verdicts
- FastAPI + SQLite backend with deterministic heuristic fallback and human-override review loop

Backend & ML Lead — GARI, GITAM Aerospace Rocketry Initiative gari.live Feb 2026 – Present

- Leading the CS/backend team for GITAM's IN-SPACe CAN-7USAT national rocketry competition entry, directing telemetry backend, sensor fusion, and ground control architecture decisions across the team (see CAN-7USAT project).Built the gari.live website and ran its technical SEO – schema markup, Search Console setup, canonical structure – taking it to the #1 organic result for "GITAM Aerospace Rocketry Initiative"

Backend Developer — Aubrynt (Remote) Jun 2026

- Contributed backend and web development work on GuardianTutor AI, an AI tutoring platform, alongside product/market research

PROJECTS

FactCheck AI — Personal Project, Creator *(RoBERTa, DistilBERT, FastAPI, Chrome Extension)* GitHub 2026

- Built an ensemble fake-news detection pipeline combining transformer models (RoBERTa, DistilBERT) with a calibrated TF-IDF/LogReg meta-model, reaching 98.5% accuracy on 98k+ articles
- Ran ablation and adversarial-robustness studies across LLM reasoning, evidence retrieval, and ML signal fusion; shipped as a Chrome extension with SHAP explainability and confidence-based verdicts

Explainable AI System for Diabetic Ulcer Detection *(PyTorch, FastAPI, Docker, MLflow)* GitHub | Live 2025–2026

- Trained CNN-based medical image classifiers with Grad-CAM and SHAP explainability; MLflow-tracked evaluation, Docker-deployed FastAPI inference with JWT auth and RBAC

CAN-7USAT Ground Control Station *(Python, FastAPI, WebSocket, PostgreSQL, React)* GitHub 2026

- Real-time telemetry backend for the **IN-SPACe Model Rocketry Competition 2026**: Kalman-filter sensor fusion, decoding binary packets over 900 MHz XBee at sub-5 ms latency

AUVBrain – Autonomous Underwater Vehicle Control System *(Python, FastAPI, ROS2, Docker)* GitHub 2026

- Deterministic observe → decide → act stack with offline LLM decision engine and rules-based fallback

Deepthi Hospital Management System — Open Source *(React, FastAPI, PostgreSQL, Razorpay)* GitHub | Live 2024 – Present

- Open-sourced production-grade HMS: three portals on one async FastAPI backend, Razorpay + HMAC-SHA256, JWT/RBAC

TECHNICAL SKILLS

ML / DL	PyTorch, Transformers (RoBERTa, DistilBERT), scikit-learn, CNNs, Grad-CAM, SHAP, MLflow
Languages	Python, JavaScript, SQL, Java, C
Frameworks	FastAPI, React, ROS2
Databases	PostgreSQL, MongoDB
Tools	Git, GitHub, Docker
Concepts	Model Training & Evaluation, Ensemble Methods, Explainable AI, Adversarial Robustness

CERTIFICATIONS

Claude 101 – Anthropic Verify | AI Fluency Framework & Foundations – Anthropic Verify | Building RAG Apps Using MongoDB Verify
